

The purpose of involving students in research is to ensure complete professionalization. In addition to the skills of diagnosis and psychological intervention, future professionals are expected to maintain permanent contact with the evolution of psychological science.

Students' participation in scientific communication sessions develops:

- Ability to identify, analyze and synthesize specialized studies on various topics in psychology;
- Skills of establish working hypotheses in the sense of critical and prospective thinking;
- The skill of selecting some psychological tools relevant for the highlighting of some psychic features;
- Ability to draw conclusions with applicative relevance for understanding human behavior.
- Capacity to share their own knowledge with the peers and to learn from other research experiences.

The papers to be presented by the students will highlight the theoretical notions relevant for the study, the objectives and hypotheses of the study, data on the tools used, sample description, statistical and psychological analysis of the hypotheses, conclusions and main bibliographical references.

The date of transmission of the PPT presentations to the address tibi_dughi@yahoo.com is 1.06.2022.
